

# Amdocs Digital Financial Services Platform

**Launch compliant mobile financial services fast**

## Boost revenue with digital wallets

Mobile wallets open the door to offering a wide range of services based around storing, moving, saving, and lending money. With a digital wallet, banks deliver a more seamless mobile experience. Other financial service providers, like insurance providers, add mobile experiences with enhanced account features. FinTechs and other businesses build new capabilities into core services, such as payments, commissions, and loyalty rewards.

The Amdocs Digital Financial Services (DFS) Platform lets you realize your digital wallet vision quickly. It's an end-to-end cloud-based platform that simplifies and accelerates establishing services that rely on mobile wallets. From mobile banking to a digital wallet for streamlining utility or toll payments – and everything in between – the platform lets you offer financial transactions through mobile technology. With the Amdocs DFS Platform, you can:

- Empower people to move money, pay bills, and manage finances in your branded mobile experience.
- Reduce time to market and costs for new financial products and services at scale.
- Meet know-your-customer (KYC) regulations and other compliance requirements easily.
- Boost financial inclusion in your markets with low-cost, revenue-generating financial services.

## Accelerating mobile money services and products

Digital wallets unleash possibilities across multiple business models. Traditional banks need digital wallets to launch digital-only brands and as a cornerstone for mobile banking services. Regional transit operators use mobile wallets to give people the power to store value and use it to pay for rides and tolls. Communication service providers turn to digital wallets to make pay-as-you-go options easier for customers.

You have multiple potential paths to launching a mobile wallet. You could undertake the expensive and time-consuming process of building a mobile wallet – including building compliant know-your-customer (KYC) and banking functionality. Or you could deploy a complex banking infrastructure that includes a digital wallet option, which would take even longer.

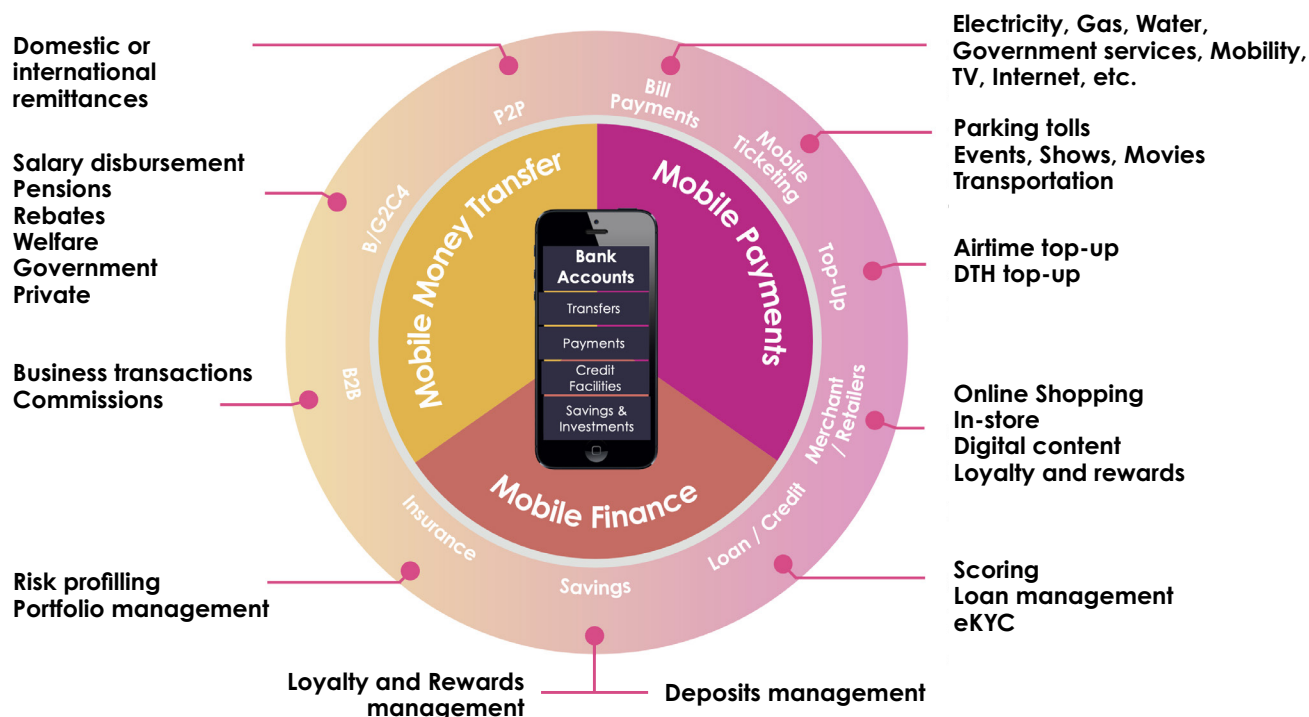

The Amdocs DFS Platform delivers a faster and more cost-effective alternative. It includes everything you need to store, transfer, save, and lend money in a mobile wallet at scale while meeting compliance requirements for your market. Thanks to flexible templates, your mobile wallet adapts to your specific use case in days or weeks – not months or years. Amdocs banking and digital experience specialists accelerate the process. Our product roadmap and regular releases keep your wallet ahead of customer expectations.

## Get digital wallet speed, scale, and flexibility

The Amdocs DFS Platform lets you:

- **Launch in days or weeks:** Start with a full mobile wallet solution and configurable templates of banking features.
- **Scale fast:** Go from 1,000 users to millions with a platform and infrastructure designed to deliver high performance at scale.
- **Work with a leader:** Amdocs has 17+ years of digital wallet experience and supports 30+ mobile wallet enterprises with 16+ billion transactions annually.
- **Adapt as needed:** Customize your mobile wallet to offer unique features suited to your business and customers.

## The right platform for your digital wallet

The Amdocs DFS Platform provides a foundation for the many ways banks, FinTechs, and other businesses take advantage of mobile financial services.

## New revenue and millions more customers

An African bank faced growing competition from digital wallet providers for payments and other financial services. It needed to build and launch a mobile wallet with a range of features, including more seamless cross-border remittances. The bank turned to Amdocs for expertise and technology, with the Amdocs DFS Platform as a foundation. With Amdocs DFS Platform, the bank:

- Generated new revenue with an expanded range of mobile financial services.
- Lowered costs and improved mobile banking quality while enhancing onboarding and KYC compliance.
- Added new products and services to deliver a market-leading mobile wallet experience.
- Expanded into six countries, with its potential customer base growing from 18 million to 100 million.
